

TTI's Success Insights Wheel®

Why use the Wheel model in your business?

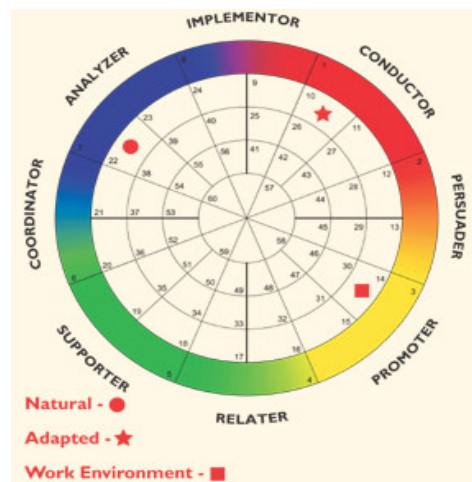

The use of the Success Insights Wheel in your business will help identify team interactions, synergies, conflicts and opportunities for growth. It is a powerful tool when debriefed with your team to promote open dialog of how to optimize your business.

People learn visually and will benefit from learning the DISC concepts and language through a model such as the Success Insights Wheel. The Success Insights Wheel demonstrates the differences between a person's Natural Style, Adapted Style and Work Environment. In addition, when profiling a team, the DISC practitioner can plot the team's behavioral composition and see potential conflicts and areas of opportunity at a glance.

How to interpret the Success Insights Wheel®

The Success Insights Wheel uses the 60 most common graphs of the 384 generated by the Style Insights assessment. The graphs are plotted on the Wheel according to all points above the energy line. The Wheel model uses 48 basic graphs with 12 exceptions. A person's high factor determines the quadrant in which the graph will appear. The Wheel is made up of eight different spokes, which are:

- **Relater** Core I,S
- **Supporter** Core S
- **Coordinator** Core S,C
- **Analyzer** Core C
- **Implementor** Core D,C
- **Conductor** Core D
- **Persuader** Core D,I
- **Promoter** Core I

We partner with Target Training International Ltd. To offer a number of assessment tools used in the coaching and consulting process. The assessments assist Executives, Teams, Organizations and HR professionals to optimize performance and realize remarkable goals.
